# HOW OUR BOTS WORK

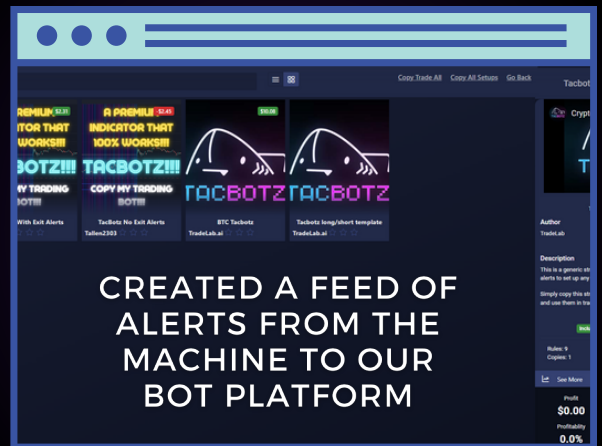

WE MADE THE TAC SIGNALS INDICATOR ON TRADINGVIEW THAT SHOWS YOU HOW TO TRADE

WHICH QUICKLY OUTGREW WHAT TRADINGVIEW ALLOWED, SO WE MOVED THEM TO OUR DATABASE TO KEEP MAKING THEM BETTER AND FASTER

USED AI MACHINE LEARNING TO FIND THE BEST TAC SIGNALS ON EVERY TICKER AND TIMEFRAME

WHICH TELLS OUR BOTS WHEN AND HOW TO TRADE AUTOMATICALLY

EACH BOT HAS ITS OWN TRADING STRATEGY BUT CAN TRADE ANY TICKER THE DATABASE TELLS IT TO

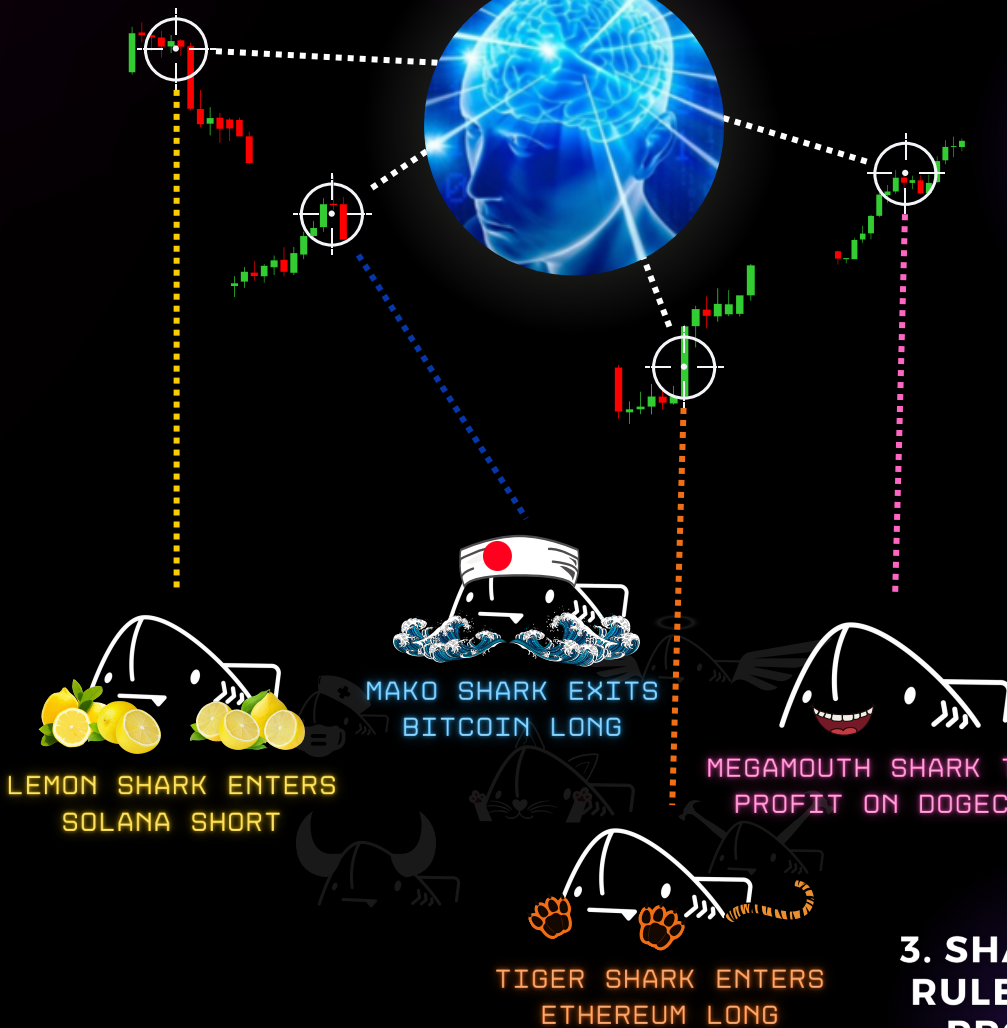

# TAC SIGNALS

1. TAC SIGNALS FINDS A TRADE

2. SENDS ALERTS THAT TELLS SHARKS HOW TO TRADE

3. SHARKS HAVE RULES TO TAKE PROFIT AND MANAGE RISK AS THEY TRADE

4. MONITOR YOUR SHARKS ON THE PLATFORM @ TACBOTZ.NET

LEMON SHARK ENTERS SOLANA SHORT

MAKO SHARK EXITS BITCOIN LONG

MEGAMOUTH SHARK TAKES PROFIT ON DOGECOIN

TIGER SHARK ENTERS ETHEREUM LONG

# SHARK BOTS

# SCALP BOTS

## HOUND SHARK

Leverage: 5x    Take Profit: 3 times every 6%    Stop loss: 6%, moves to entry after first take profit hits

- Enters when multiple scenario entries show up on different timeframes at the same time
- Exits when momentum of a very large price move is slowing to a stop
- May or may not like belly rubs

## LEOPARD SHARK

Leverage: 25x    Take Profit: 3 times every 1%    Stop loss: 1%, moves to entry after first take profit hits

- Enters when a candle has strong enough trending volume and momentum to create new tac levels
- Exits when momentum suddenly drops
- Is self conscious of looking like an abomination of graphic design

# TIGER SHARK

Leverage: 10x    Take Profit: 3 times every 5%    Stop loss: 5%, moves to entry after first take profit hits

- Enters when multiple scenario entries show up on different timeframes at the same time
- Exits when momentum of a very large price move is slowing to a stop
- Either plays golf or sponsors cereal

# CAT SHARK

Leverage: 3x    Take Profit: 3 times every 10%    Stop loss: 10%, moves to entry after first take profit hits

- Enters when multiple scenario entries show up on different timeframes at the same time
- Exits when momentum of a very large price move is slowing to a stop
- Swims faster if they're chasing a laser beam on the ocean floor

# LEMON SHARK

Leverage: 10x    Take Profit: 3 times every 3%    Stop loss: 3%, moves to entry after first take profit hits

- Enters when multiple scenario entries show up on different timeframes at the same time
- Exits when momentum of a very large price move is slowing to a stop
- Their bite is very sour

# GREAT WHITE SHARK

Leverage: 25x    Take Profit: 3 times every 2%    Stop loss: 2%, moves to entry after first take profit hits

- Enters when multiple scenario entries show up on different timeframes at the same time
- Exits when momentum of a very large price move is slowing to a stop
- Keeps telling themselves manual traders are friends, not food

# MAKO SHARK

Leverage: 10x    Take Profit: 3 times every 2%    Stop loss: 2%, moves to entry after first take profit hits

- Enters when price gets close to an existing tac level and strong volume and/or momentum signals a move through or away from a tac level
- Exits when momentum of a very large price move is slowing to a stop
- Favorite food is shrimp tempura with kaminari hot sauce

# BABY SHARK

Leverage: 7x    Take Profit: 3 times every 0.5%    Stop loss: 0.5%, moves to entry after first take profit hits

- Enters when price gets close to an existing tac level and strong volume and/or momentum signals a move through or away from a tac level
- Exits when momentum of a very large price move is slowing to a stop
- Doo doo, do doo, do doo

# SHARK BOTS

# SWING BOTS

Leverage: 7x    Take Profit: 3 times every 5%    Stop loss: 5%, moves to entry after first take profit hits

- Enters when more than 2x average trading volume comes in at the beginning of a new price trend
- Exits when momentum of a very large price move is slowing to a stop
- Has a great singing voice and owns long, white, flowy robes

## WHITE TIP SHARK

Leverage: 5x    Take Profit: 3 times every 10%    Stop loss: 10%, moves to entry after first take profit hits

- Enters when price gets close to an existing tac level and strong volume and/or momentum signals a move through or away from a tac level
- Exits when momentum of a very large price move is slowing to a stop
- Always down to give an autograph

# HAMMERHEAD SHARK

Leverage: 15x    Take Profit: 3 times every 2%    Stop loss: 2%, moves to entry after first take profit hits

- Enters when momentum suddenly drops
- Exits when momentum suddenly drops in the opposite direction
- Looks biologically correct to people who shop at Home Depot

# NURSE SHARK

Leverage: 5x    Take Profit: 3 times every 7%    Stop loss: 7%, moves to entry after first take profit hits

- Enters when price gets close to an existing tac level and strong volume and/or momentum signals a move through or away from a tac level
- Exits when momentum of a very large price move is slowing to a stop
- Is the unsung hero of marine medicine

# BULL SHARK

Leverage: 15x    Take Profit: 3 times every 3%    Stop loss: 3%, moves to entry after first take profit hits

- Enters when price gets close to an existing tac level and strong volume and/or momentum signals a move through or away from a tac level
- Exits when momentum of a very large price move is slowing to a stop
- Hates red tide, always charges at it

# SHARK BOTS HOLD BOTS

## MEGAMOUTH SHARK

Leverage: 3x    Take Profit: 3 times every 20%    Stop loss: 20%, moves to entry after first take profit hits

- Exits when momentum of a very large price move is slowing to a stop
- Exits when momentum of a very large price move is slowing to a stop in the opposite direction
- A clown fish just told them a joke

## ZEBRA SHARK

Leverage: 1x    Take Profit: 3 times every 25%    Stop loss: 25%, moves to entry after first take profit hits

- Enters when price gets close to an existing tac level and strong volume and/or momentum signals a move through or away from a tac level
- Exits when momentum of a very large price move is slowing to a stop
- Hides well in seaweed

# WHAT IS THE TACBOTZ TAC SIGNALS?

A brief refresher on our signals

Tacsignals is a group of signals that tell you how to enter, hold, and exit a trade. It uses volume, price action, momentum, levels of manipulation, and modifies classic indicators to find good trading opportunities. Each Shark Bot has a different combination of these signals as their style of trading.

# Entry Signals

There's certain things that help price move well in the market. When several of those things appear at the same time like a surprise birthday party or a flash mob, then these signals will paint. Exciting!

**Large Volume In:** a bold triangle with the text "Large Vol In" above or beneath the triangle. Shows up when more than 2x average trading volume comes in at the beginning of a new price trend.

**Trend In:** a faded triangle with the text "Trend In" above or beneath the triangle. Shows up when a combination of well known indicators sync up and point out a good entry.

**Small Volume In:** a small faded triangle with the text "Small Vol In" above or beneath the triangle. Shows up when ramping volume appears at the beginning of a new price trend.

# Exit signals

These signals give you an exit when the factors behind a good price move disappear like lower volume, slowing momentum, or indicators turning the other direction at the same time. We are not liable for the regret one feels for ignoring these exits as they pass by only to have price action put dirt in their eye

**Volume Out:** a blue or purple square with the text "Vol Out" above or below it. Shows up when volume suddenly drops or dies out.

**Momentum Out:** a triangle with the text "Mom Out" above or below the candle. Shows up when momentum suddenly drops.

**Trend Out:** a triangle with the text "Trend Out" above or below it. Shows up when a combination of well known indicators sync up and point out a good exit.

**Momentum Fade:** a vertical line through a candle. Shows up when momentum of a very large price move is slowing to a stop. Usually shows the start of consolidation before the next wave or a trend reversal.

# Tac Levels

Every now and then, something out of the ordinary happens on a chart. Maybe it's a bunch of traders acting on news, maybe price moves unusually to make a splash, or maybe it's a super rare moment of confluence among indicators. Tacsignals points these significant candles out and draws levels on their open and close price.

Once the levels are drawn, we've seen price react to them like a platform in a video game. Price can hop from one platform to the next to go up or down. Whether each platform act as speed boost or a dead end depends on the strength of price action.

While traditional levels need hindsight to draw, tac levels are spotted in real time and remain significant until the next tac lines form.

# Even Better Entry Signals

So take our normal entry signals and combine them all when they get close to a tac level to tell us whether price will break through or reject off of that level.

## Scenario 0

These show up when a candle has strong enough trending volume and momentum to create new tac levels

## Scenario 1

These show up when price gets close to an existing tac level, strong volume and/or momentum will signal a move through or away from the level

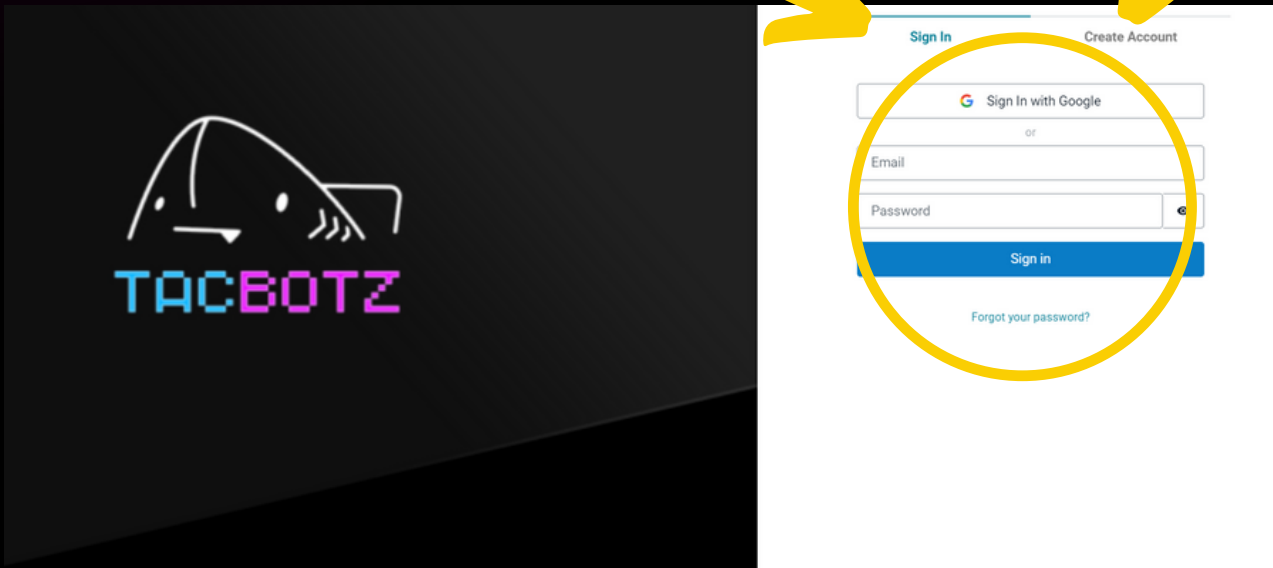

## Scenario 69

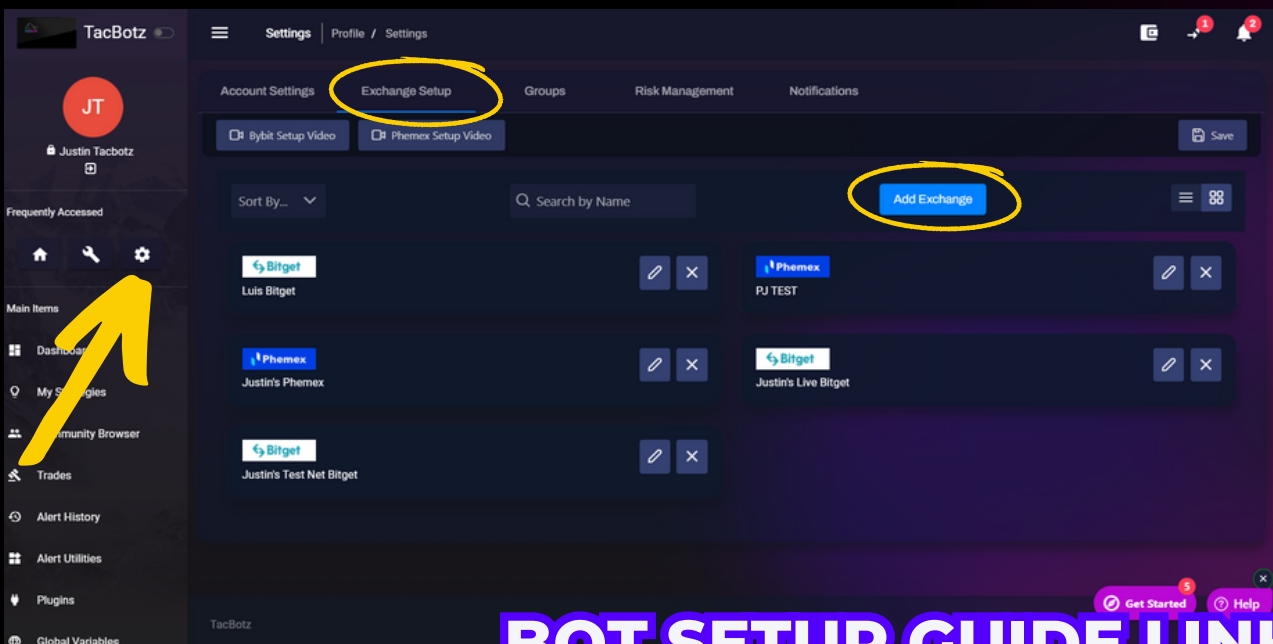

Nice. These show up when 3 or more of those scenario entries show up on different timeframes at the same time

# HOW TO COPY SHARK BOT TRADES

- CREATE / SIGN IN TO YOUR TACBOTZ ACCOUNT AT TACBOTZ.NET AND CHOOSE YOUR TRADING PLAN

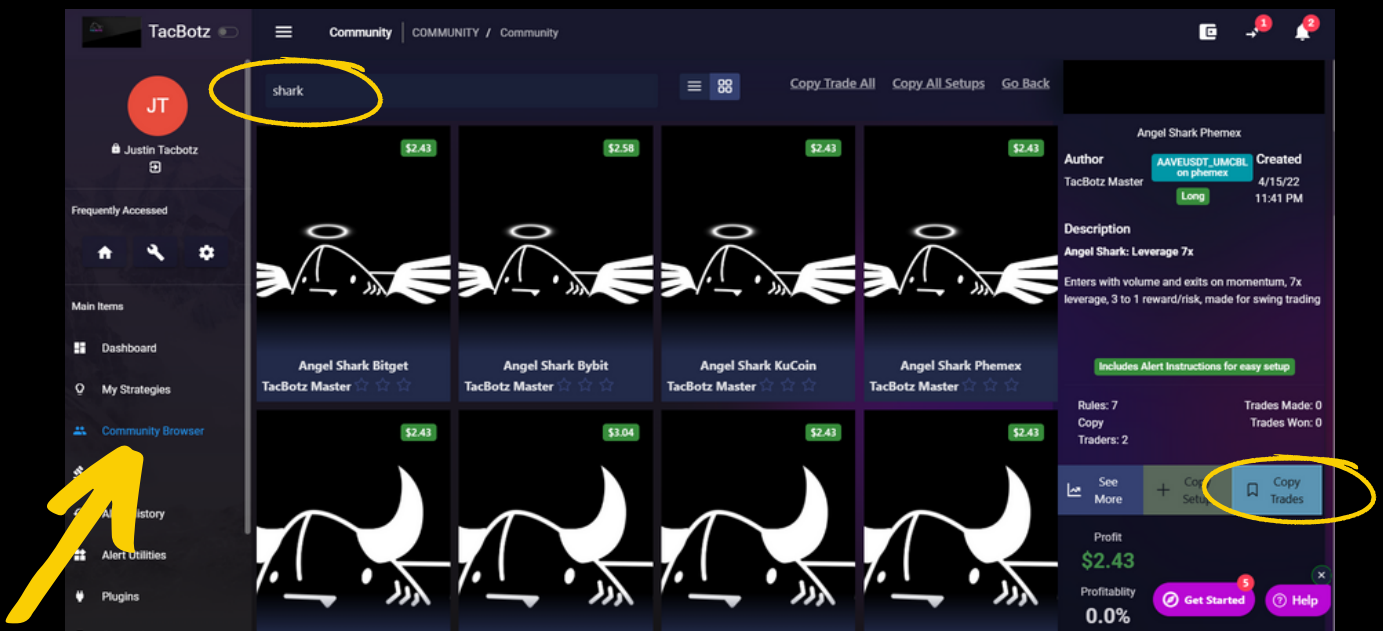

- LINK YOUR EXCHANGE TO YOUR ACCOUNT (SEE THE BOT SETUP GUIDE FOR MORE DETAILS)

**[BOT SETUP GUIDE LINK](#)**
